

To Use Solvy

- Place SOLVY on top of framed fabric.
- After the embroidery process is complete, tear-away the larger areas of SOLVY inside and outside of the design.
- Dissolve SOLVY on very small areas by lightly misting the area. It will disappear and be removed from the fabric at first washing. (Note that embroidery should not be left damp or wet longer than a few minutes).
- On larger area, mist lightly to dissolve SOLVY. After a few seconds the dissolved SOLVY solution may be removed with a dampened sponge or cloth.
